

Important Medical Alert

A connection between **FOSAMAX** and other bisphosphonates, with a serious bone disease called Osteonecrosis of the Jaw (ONJ) has been found.

BISPHOSPHATES are commonly used in tablet form to prevent and treat osteoporosis in post-menopausal women, and older men. They are also used in the treatment of **PAGET'S DISEASE**. Stronger forms given orally or intravenously (I.V.) are commonly used in the management of advanced cancers including, but not limited to, lung cancer, breast cancer, prostate cancer, multiple myeloma and other metastatic cancers.

Have you **EVER** taken any of the following:

Oral Medications:

Y	N	Alendronate (Fosamax, Fosamax Plus)
Y	N	Clodronate (Bonefos, Ostac)
Y	N	Etidronate (Didronel)
Y	N	Ibandronate (Boniva)
Y	N	Pamidronate (Aredia)
Y	N	Risedronate (Actonel)
Y	N	Tiludronate (Skelid)
Y	N	Zoledronate (Zometa, Reclast) annual infusion

Y	N	Have you ever been treated for cancer with chemo therapy in the past? This applies even if the treatments was many years prior
---	---	--

Intravenous I.V., chemo therapy

Y	N	Clondronate (Bonefos)
Y	N	Pamidranate (Aredia)
Y	N	Zoledronate (Zometa)
